

## INTELLIGENCE TOUCH DATA

PRIVATEPOL develops databases and software for cross-border investigations and business intelligence. We are creating technologies to enrich corporate and person-focused data sets with expert knowledge and mine these datasets intelligently. PRIVATEPOL pioneers the application of neural networks to detective analytics in the personal and corporate datasets.

The world is becoming more transparent daily. We develop technologies which enable their users to enjoy it being much more transparent for them now. We provide the intelligence benefits of our constantly expanding smart databank to interested parties to support litigation, asset tracing and competitive research.

1

Supporting investigations, litigation and enforcement with actionable intelligence

2

Detective analytics for asset tracing

3

Business and competitive intelligence

4

Smart databank: mapping people, entities / assets and their relationships
